*Rand article from wiki

The name film originates from the fact that photographic film also called film stock has historically been the medium for recording and displaying motion pictures. Many other terms exist for an individual motion-picture, including picture, picture show, moving picture, photoplay, and flick. The most common term in the United States is movie, while in Europe film is preferred. Common terms for the field in general include the big screen, the silver screen, the movies, and cinema the last of these is commonly used, as an overarching term, in scholarly texts and critical essays. In early years, the word sheet was sometimes used instead of screen. Film in general is not a good term to refer to a long standard commercial video production since it’s ambiguous in general and therefore requires context for correct interpretation.

As a medium, film is not limited to motion pictures, since the technology developed as the basis for photography. It can be used to present a progressive sequence of still images in the form of a slideshow. Film has also been incorporated into multimedia presentations and often has importance as primary historical documentation. However, historic films have problems in terms of preservation and storage, and the motion picture industry is exploring many alternatives. Most films on cellulose nitrate base have been copied onto modern safety films. Some studios save color films through the use of separation masters: three B&W negatives each exposed through red, green, or blue filters essentially a reverse of the Technicolor process. Digital methods have also been used to restore films, although their continued obsolescence cycle makes them as of 2006 a poor choice for long-term preservation. Film preservation of decaying film stock is a matter of concern to both film historians and archivists and to companies interested in preserving their existing products in order to make them available to future generations and thereby increase revenue. Preservation is generally a higher concern for nitrate and single-strip color films, due to their high decay rates black-and-white films on safety bases and color films preserved on Technicolor imbibition prints tend to keep up much better, assuming proper handling and

storage.

Despite the United States progress on vaccination, spread of Delta variant intensified across the country in July 2021. As children younger than 12 could not be vaccinated for COVID-19, a number of studios announced plans to delay films targeting families or pursue hybrid premium video on-demand PVODstreaming releases126127 on July 31, Paramount Pictures cancelled the release of Clifford the Big Red Dog initially scheduled for September,128 and later rescheduled it for a simultaneous release in theaters and on Paramount+ for November of that year,129 while United Artists Releasings The Addams Family 2 was also shifted to a hybrid release.127130 On August 12, Sony Pictures also delayed the release of Venom: Let There Be Carnage by three weeks to October 15, citing Delta variant.131 On September 1, 2021, Paramount announced that the releases of Jackass Forever, Top Gun: Maverick and Mission: Impossible 7 would be delayed to February 2022, May 2022, and September 2022, respectively, amid surging cases of the Delta Variant.132 On September 6, 2021, however, Sony decided to move up the release date of Venom: Let There be Carnage to October 1, 2021, following the box office success of Shang-Chi and the Legend of the Ten Rings.133 The success of Shang-Chi and the Legend of the Ten Rings also led to The Walt Disney Company deciding to release the rest of their 2021 films exclusively in theaters.134
